

Users

Types of Users

User profile

Persona

Who are the users?

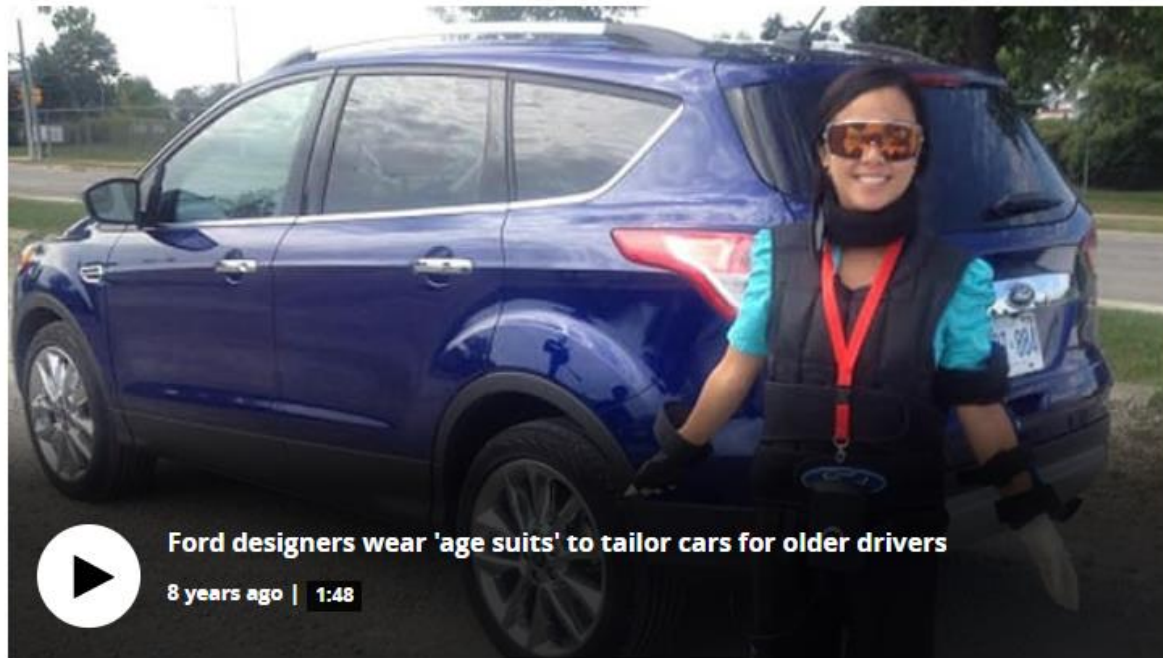

- Can be a simple and naïve question
- Obviously ...
 - Users are the people who will use the final product to accomplish a goal.

Ford car makers wear 'age suits' to design for older drivers

Suit simulates neck stiffness, joint pain, back problems and various eye conditions

CBC News · Posted: Sep 11, 2014 5:00 AM ET | Last Updated: September 12, 2014

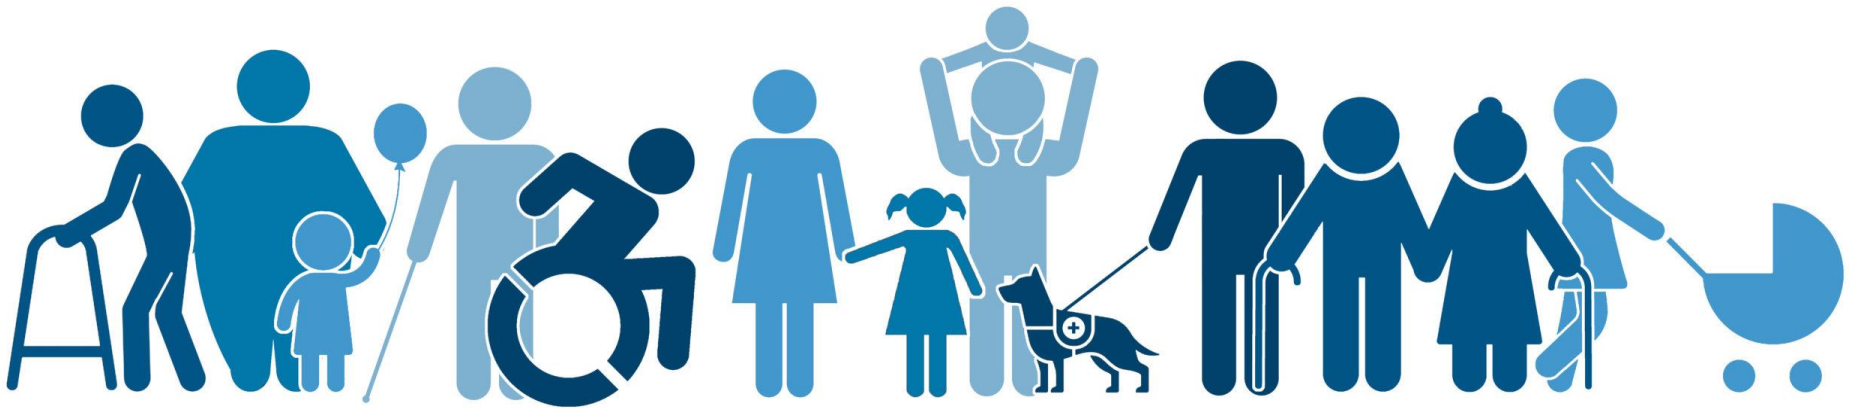

Suit simulates neck stiffness, joint pain, back problems and various eye conditions

Know your users

- Who they are?

Know your users

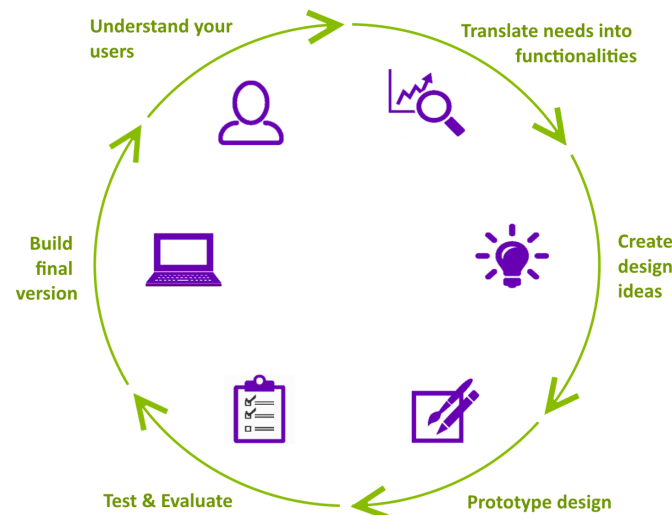

- Who they are?

You are not (usually)
your user

Principles of User-Centered Design

- Put people first
- Users and their goals should influence design
 - Design should not just be influenced by technology
- Focus on users and their tasks right from the beginning
- Iterative design and evaluation
 - Users are consulted throughout the process and their feedback is fed back into the design

Human Factors

- Human factor principles in user experience (UX) design refers to the ways in which the design team considers the **demographics, personality traits, desires, and physical limitations** of the product's users.
- Users are limited in their capacity to process and retrieve information

Try to read the paragraph below...

- According to a rscheearch at Cmabrigde Uinervtisy, it deosn't mttar in waht oredr the ltteers in a wrod are, the olny iprmoetnt tihng is taht the frist and lsat ltteer be at the rghit pclae. The rset can be a total mses and you can sitll raed it wouthit porbelm. Tihs is bcuseae the huamn mnid deos not raed ervey lteter by istlef, but the wrod as a wlohe and the biran fguiers it out aynawy.

Read the lists below, cover it up, and then try to recall as many of the items as possible

- 3, 12, 6, 20, 15, 49, 81, 76, 8, 97, 13, 56

Read the lists below, cover it up, and then try to recall as many of the items as possible

Read the lists below, cover it up, and then try to recall as many of the items as possible

- 3, 12, 6, 20, 15, 49, 81, 76, 8, 97, 13, 56
- Cat, house, paper, laugh, people, red, yes, number, shadow, broom, rain, plant, lamp, chocolate, radio, one, coin

Read the lists below, cover it up, and then try to recall as many of the items as possible

According to George Miller's (1956) theory, 7 ± 2 chunks of information can be held in short-term memory at any time.

How to apply this in interface design?

How to apply this in interface design?

- Have only 7 options on a menu
- Display only 7 icons on a menu bar
- Place only 7 items on a drop down menu

Common mistake

- Many people start by designing the interface
- But how do you know...
 - what the software needs to do?
 - what the user wants to do?
 - what needs to be displayed?
 - how the info should be organized?
 - what should be shown together, or in sequence?

Understanding the type of users

- All the users are
- Equal??

Who are your users?

- People who directly interact with the product/application to accomplish a task
- But is that it?
- Others
 - Those who manage users, i.e. supervisors
 - Those who receive output from the system, i.e., accountant
 - Those who maintain the system, i.e., IT support
 - Those who make purchasing decisions, i.e. owner, board

Categories of users

- Three categories of users:
 - Primary:
Frequent hands-on (everyday)
 - Secondary:
Occasional or via someone else (getting reports)
 - Tertiary:
Affected by its introduction (owner)

Technology for healthcare

- **Primary Users:** Patients, clinicians
 - *Those who directly interact with the technology*
 - A diabetes patient uses a smart-phone app everyday to remind of insulin injection and to register glucose values
- **Secondary users:** developers, technicians
 - *Those who someway benefit from the technology; use it via an intermediary*
 - Designers and developers use the app to test it
- **Tertiary user:** companies that provide funds for the technology
 - *Those who are affected by the technology use and decide its purchase/implementation*
 - A pharmaceutical company funds the smartphone app development

Question

- Who are the users for the check-out system of a large supermarket?

Answer

- Check out operators:
 - primary users; interact with the system daily

- Customers:
 - tertiary users; they want it to work properly

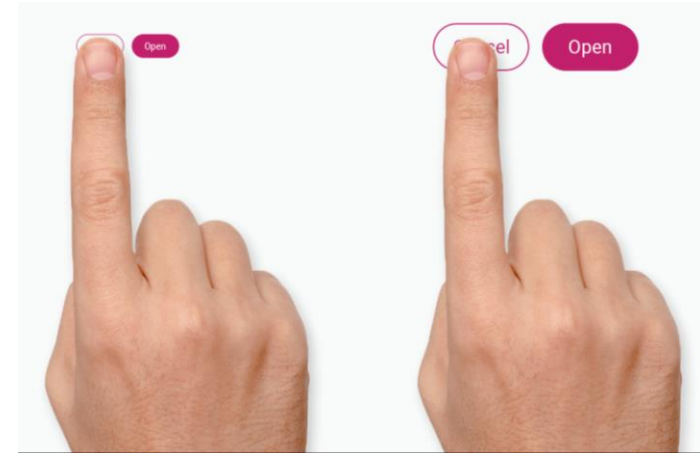

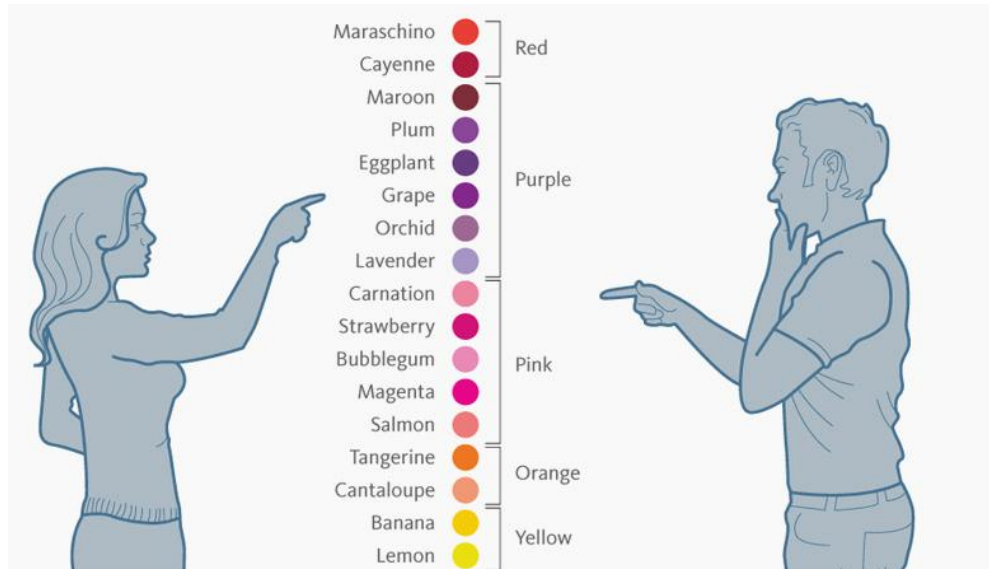

- Managers and owners:
 - secondary or tertiary users;
 - they may occasionally interact with the system but mostly concerned about satisfied customers, safety and good functionality of system

Exercise

- Who are the primary users of the following systems:
 - UBC Canvas system that allows professors/students to keep track of assignments, labs, grades, syllabus and others.
 - Profs and students who frequently use the system

User factors influencing decisions

- User factors affect the development process :
 - Age: reduce number of tasks, simplified interface
 - Disabilities: larger buttons, sound cues
 - Culture: icons, color
 - Gender
 - Experience

Types of users and factors influencing decisions

- Three types of experiences:
 - Novices:
highly visible functions, restricted set of tasks, tutorials to more complex tasks
 - Intermediate:
reminders and tips, interface facilitates advanced tasks
 - Experts:
shortcuts for efficiency, customizable interface

User Profile

- Collection of attributes for describing a collection of users
 - i.e., age, disabilities, gender, culture, experience, plus any other factors relevant to a particular system
 - e.g., ages 18 - 35
- A user profile will help you to understand who you are building your product for
- Most systems will have a number of different profiles

User Profile

- Steps:
 - Finding information to build your user profile
 - Understanding the type of users
 - Creating the user profile

Finding information to build your user profile

- Information can be obtained from
 - Product manager
 - Marketing studies
 - Market analysts
 - Customer support
 - Census bureau
 - Surveys
 - others

Creating the user profile

- Demographic characteristics
 - Age, gender, location
- Occupation
 - Current job, title
- Company information
 - Name, size
- Education
 - Degree, major
- Computer experience
 - Years of experience
- Specific product experience
 - Experience with competitors' products
- Tasks
 - Primary tasks
- Technology available
 - Mobile, Laptop
- Others
 - Learning style

Example

- Travel agent characteristics ranges
 - Age: 25-40 (average 32 years)
 - Gender: 50% female, 50% male
 - Job title: Travel agent, travel specialist, travel associate
 - Experience level: 0-10 years (typical 3 years)
 - Work hour: 40 hours per week
 - Education: High school to Bachelor degree
 - Location: Anywhere in Canada
 - Income: \$45,000 - \$65,000/ year depends on experience
 - Technology: Some computer experience
 - Disabilities: no specific limitations

Persona

- A user profile provides a summary describing a collection of users.
- Since the profile is meant to include all the users within the group, the details in the profile generally describe ranges or frequencies of responses.
- Personas
 - Personas are descriptions of individual people who represent groups of users that would interact with your system
 - A persona has specific details that accurately reflect and highlight important features of the group
 - Rich descriptions of typical users
 - Make profiles more life-like

Persona

Jill Anderson

"I'm looking for a site that will simplify the planning of my business trips."

AGE 29

OCCUPATION Regional Director

STATUS Single

LOCATION Portsmouth, NH

TIER Frequent Traveler

ARCHETYPE The Planner

Organized

Practical

Protective

Hardworking

Bio

Jill is a Regional Director who travels 4-8 times each month for work. She has a specific region in which she travels, and she often visits the same cities and stays in the same hotel. She is frustrated by the fact that no matter how frequently she takes similar trips, she spends hours of her day booking travel. She expects her travel solutions to be as organized as she is.

Personality

Brands

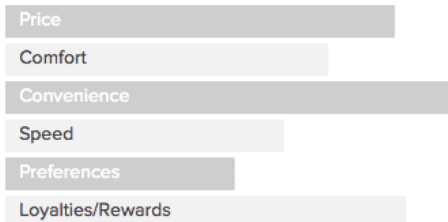

Goals

- To spend less time booking travel
- To maximize her loyalty points and rewards
- To narrow her options when it comes to shop

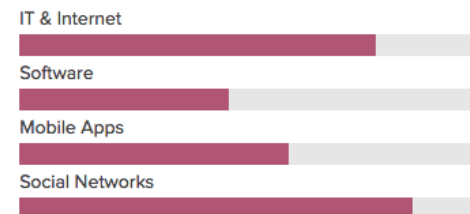

Frustrations

- Too much time spent booking - she's busy!
- Too many websites visited per trip
- Not terribly tech saavy - doesn't like the process

Motivations

Technology

Persona

Clark Andrews

AGE 26

OCCUPATION Software Developer

STATUS Single

LOCATION San Jose, CA

TIER Experiment Hacker

ARCHETYPE The Computer Nerd

Friendly

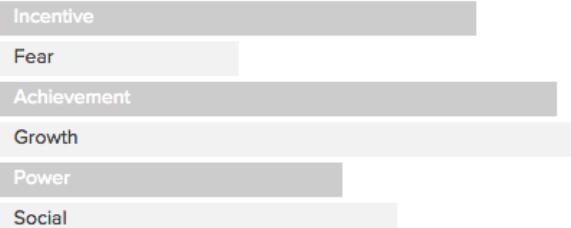

Clever

Go-Getter

"I feel like there's a smarter way for me to transition into a healthier lifestyle."

Motivations

Goals

- To cut down on unhealthy eating and drinking habits
- To measure multiple aspects of life more scientifically
- To set goals and see and make positive impacts on his life

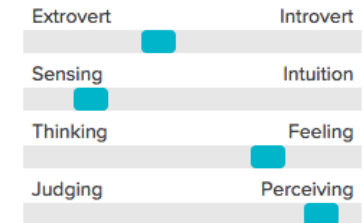

Frustrations

- Unfamiliar with wearable technology
- Saturated tracking market
- Manual tracking is too time consuming

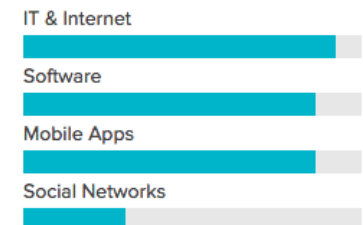

Bio

Aaron is a systems software developer, a "data junkie" and for the past couple years, has been very interested in tracking aspects of his health and performance. Aaron wants to track his mood, happiness, sleep quality and how his eating and exercise habits affects his well being. Although he only drinks occasionally with friends on the weekend, he would like to cut down on alcohol intake.

Personality

Technology

Brands

What's in a Persona

- Text description about a user
- Background information, hobbies, interests, habits, personality, likes/dislikes
- There's nothing about the interface/technology you are trying to design

What's in a Persona

- How to create a good persona:
 - Find the users - Study lots of users to start getting a sense of who they are
 - Build a hypothesis - What is the context that matters
 - Verification - Find data to support the initial patterns you identified
 - Finding Patterns - List the patterns/categories you found
 - Construct Personas
- <https://www.interaction-design.org/literature/article/creating-personas-from-user-research-results>

Persona

Be aware of when creating personas

- Three primary personas is a common recommendation
- Personas should never replace conducting usability activities with your end user
- When creating a persona, it should be fictional, but describe attributes from real users

Good personas

- A good persona description is not a list of tasks or duties
- It's a narrative that describes the flow of someone's day, as well as their skills, attitudes, environment and goals.
- A persona answers critical questions that a job description or task list doesn't, such as:
 - Why are they using this product in the first place?
 - Which pieces of information are required at what points in the day?

What did we cover

- Principle of user-centered design
 - Users not technology should drive design
 - Iterative design and evaluation
- Users
 - Primary users
 - Secondary users
 - Tertiary users
- User profiles
 - Collection of attributes for a 'typical' user
- Persona
